KARTHIK SIYADRI

Snowflake Developer | ETL/ELT Developer | Cloud Data Engineer

+91 9515210553 | siyadri.karthik@gmail.com

PROFESSIONAL SUMMARY

Results-driven IT professional with over 6.5 years of experience across Snowflake development, software development, integration, and geospatial engineering. Experienced across the Data Engineering Lifecycle, including analysis, design, development, implementation, maintenance, and optimization of data engineering and database solutions across OLTP/OLAP systems. Strong expertise in designing ELT/ETL pipelines, Snowflake data platforms, Medallion architectures, data modelling, data ingestion, data analysis, and advanced analytics using Snowflake Cortex AI. Hands-on experience with SnowSQL, Snowpipe, Streams, Tasks, Dynamic Tables, Time Travel, Zero-Copy Cloning, DBT, SQL, Python, Java, Oracle PL/SQL, AWS, Azure, Kubernetes, and Streamlit, with additional experience in Mule ESB integration, API design, SQL development, messaging, scheduling, deployment, and geospatial data services.

CORE COMPETENCIES

- Snowflake Development
- ETL / ELT Development
- Data Engineering Lifecycle
- Data Warehouse Architecture
- Data Modelling
- Star / Snowflake Schema
- 3NF Data Modelling
- SnowSQL
- Snowpipe
- Streams & Tasks
- Dynamic Tables
- Time Travel
- Zero-Copy Cloning
- Snowflake Cortex AI
- AI / LLM Functions
- Data Ingestion
- Change Data Capture (CDC)
- Data Analysis
- SQL Development
- Python
- Oracle PL/SQL
- AWS S3 & Lambda
- Azure
- Kubernetes
- DBT
- Streamlit Data Apps
- Mule ESB Integration
- RAML API Design
- Database Development
- OLTP / OLAP Systems
- Data Privacy & Security
- Agile Development
- Code Review & Deployment
- Technical Documentation

PROFESSIONAL EXPERIENCE

Senior Consultant **April 2026 – July 2026**

Ascendion Digital Solutions Private Limited

Project: HealthCare Data Cloud & Patient Analysis (Cycle Pharmaceuticals)
Client: Beghou
Key Responsibilities & Achievements

- Designed and implemented scalable Snowflake schemas using Star and Snowflake schema patterns to centralize patient status data from Salesforce and legacy healthcare systems.
- Developed complex ELT data transformation pipelines using SnowSQL, Snowflake Tasks, and Streams to synchronize care plan records between Salesforce and Power BI.
- Implemented continuous data ingestion using Snowpipe and applied Change Data Capture (CDC) logic to support near real-time patient status updates.
- Collaborated with business analysts, Salesforce teams, analytics teams, and client stakeholders to gather requirements and deliver data integration solutions.
- Implemented data governance and security controls including Row-Level Security (RLS), Dynamic Data Masking, and Role-Based Access Control (RBAC) for healthcare data privacy and compliance.
- Contributed to a centralized Snowflake Data Cloud initiative designed to streamline patient status management, operational reporting, and stakeholder visibility into care plan lifecycles.

Environment: Snowflake, SnowSQL, Snowpipe, Streams, Tasks, Salesforce, Power BI, ELT, CDC, RLS, Dynamic Data Masking, RBAC.

Software Engineer **July 2023 – July 2025**

Wissen Infotech Private Limited

Project: Hospital Management System (I-CARE) – Snowflake Developer – Snowflake & SQL
Client: Wabtec
Key Responsibilities & Achievements

- Designed Snowflake data models using Star and Snowflake schema patterns for analytical workloads supporting hospital management data.
- Built automated data transformation pipelines using Snowflake Streams and Tasks to maintain data freshness and consistency.
- Developed real-time data ingestion mechanisms using Snowpipe and managed external stages connected to Amazon S3 buckets.
- Used Snowflake Variant data types to parse and store semi-structured JSON input for product and catalog feeds.
- Developed efficient SnowSQL scripts to transform raw operational data into clean, query-ready structures for downstream use.
- Created Time Travel-based recovery processes to audit data changes and support restoration requirements.
- Implemented alerting and logging mechanisms through Snowflake Tasks for critical data jobs and operational monitoring.
- Developed Dynamic Tables and Standard Views using optimized SQL logic for business teams, along with materialized and secure views for reporting.
- Applied clustering keys and table partitioning techniques to optimize performance on large fact tables and configured warehouse auto-suspend and auto-resume policies for resource and cost optimization.
- Collaborated with analysts to deliver custom views and access layers while maintaining compliance and privacy standards, and participated in Agile development, code reviews, deployments, and documentation.

SQL Developer | Integration Developer **June 2022 – February 2023**

TEKsystems Global Service Private Limited

Project: OTIR – One Time Invoice Registration
Client: Ahold Delhaize, Netherlands
Key Responsibilities & Achievements

- Supported the OTIR initiative that automated processing of approximately 100,000 paper and PDF invoices previously handled manually through Akritiv for Dutch entities under the Global Support Office (GSO).
- Assisted in designing basic database tables, schemas, and relationships aligned with project data requirements.
- Created simple to moderately complex SQL queries for data retrieval and manipulation across project data structures.
- Created database views and summary tables to support dashboards and business intelligence tools.
- Tested data integrity, applied database constraints, and debugged SQL query logic to support reliable data processing.
- Monitored and optimized query performance using indexing and execution plans to improve database query efficiency.
- Maintained documentation covering SQL queries, schema changes, and database standards.
- Worked with DBAs, analysts, and developers to understand project requirements and support implementation activities.

Software Developer **April 2021 – February 2022**

Vsoft Consulting Corporation Private Limited

Project: GRO 24/7
Client: Unilever
Key Responsibilities & Achievements

- Developed integration solutions using RAML-based API design for the GRO 24/7 digital platform.
- Implemented Mule ESB integrations between core business systems to support connectivity across application environments.
- Performed unit testing and integration testing of Mule applications to validate integration functionality and reliability.
- Built and maintained technical documentation covering integration solutions, test plans, and user guides.
- Implemented Rules Matching Components to support dynamic business logic within integration solutions.
- Contributed to a digital platform designed to empower small retailers with tools and services for smarter purchasing and better business management.

GIS Engineer **January 2017 – April 2019**

RMSI Private Limited

Project: Geo-Spatial Data Services
Client: Apple, USA
Key Responsibilities & Achievements

- Performed end-to-end geospatial data services activities including digitization, conversion, and maintenance of map data for mapping initiatives.
- Digitized road networks using Fusion-X with inputs from aerial imagery and 360° panoramic views.
- Identified and labeled street names using defined naming conventions and panoramic data to support accurate map content.
- Worked on road sign guidance and substrate mapping activities to support geospatial data accuracy.
- Applied aerial imaging and 360° panoramic mapping information during geospatial data processing and maintenance activities.
- Participated in innovation sessions focused on improving digitization efficiency and geospatial data service processes.

TECHNICAL SKILLS

- **Cloud & Data Platforms:** Snowflake, Snowflake Cortex (AI/LLM), AWS S3, AWS Lambda, Azure, Kubernetes
- **Snowflake Technologies:** SnowSQL, Snowpipe, Streams, Tasks, Dynamic Tables, Zero-Copy Cloning, Time Travel, Variant Data Types, Clustering Keys, Materialized Views, Secure Views
- **ETL / Data Engineering:** DBT, ETL, ELT, Data Ingestion, Change Data Capture (CDC), Data Modelling, Star Schema, Snowflake Schema, 3NF
- **Programming & Databases:** SQL, Python, Java, Oracle PL/SQL, JDBC, SQL Database Connectors
- **AI & Analytics:** Snowflake Cortex LLM Functions (Summarization, Sentiment Analysis, Extraction), Streamlit Data Apps, Data Analysis
- **Integration & Messaging:** RAML, Mule ESB, ActiveMQ, Solace, JMS
- **Deployment & Scheduling:** GitHub, Jenkins, Azure Pipelines, Control-M, Kafka Topic, SLIM
- **Management & Geospatial:** Jira, Fusion-X, Aerial Imaging, 360° Panoramic Mapping

EDUCATION

Bachelor of Technology in Electronics and Communications Engineering **2016**

MLR Institute of Technology and Management, JNTU University, Hyderabad
